TG 11

Data: Top Gun 11

Material snow gun: Aluminium

Material tower: Galvanized steel

Weight snow gun: 55 kg

Weight bracket: 38 kg

Lenght: 11 m

Raise, low and swivel mechanism:

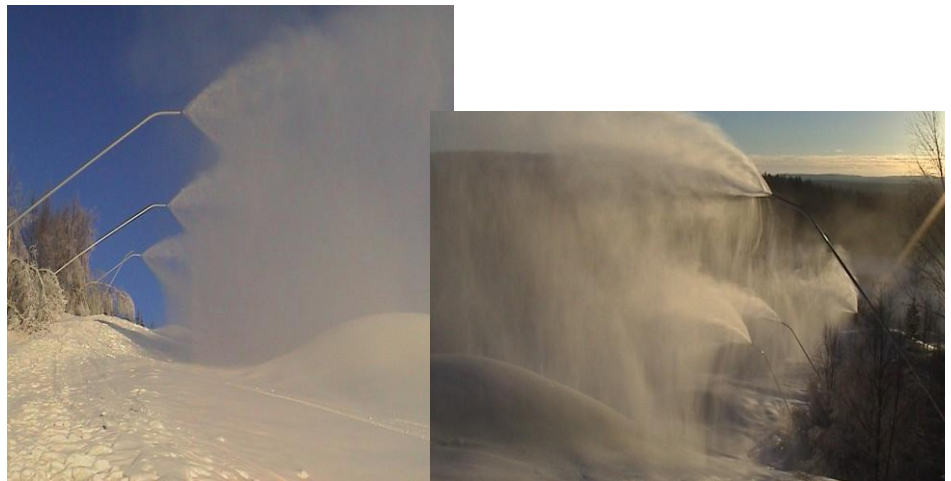

Mechanical or motor-driven screw or hydraulic hand pump

Brackets for different needs:

Concrete foundation

Pole bracket

Rock foundation

Capacity/ waterconsumption at 30 bars waterpressure:

-3°C 100 liter / min =
about 15 m3 snow/hour

-5°C 200 liter / min =
about 30 m3 snow/hour

-7°C 300 liter / min =
about 45 m3 snow/hour

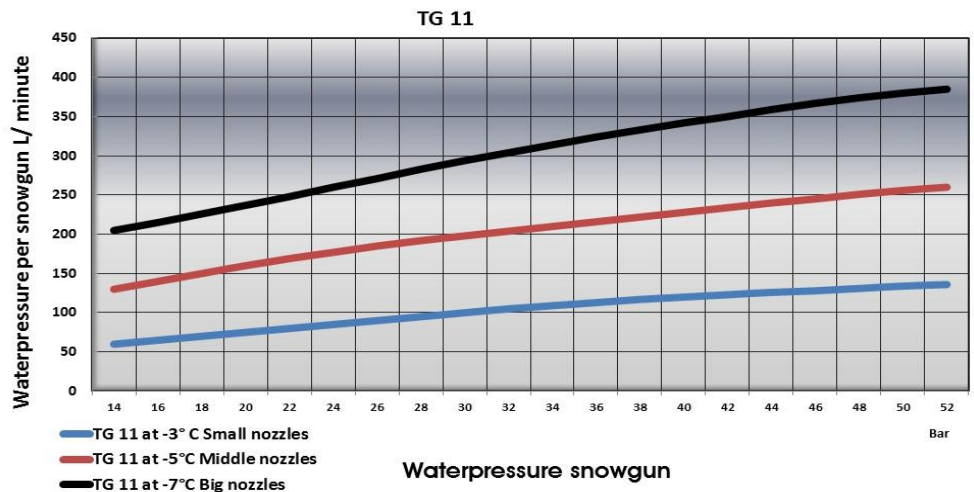

Compressed air consumption:

At 7 bar only 1 m3/min

Air pressure: >5 bar

Water pressure: 14 - 50 bar

JL Toppteknik AB is
certified for
ISO 9001 Quality and
ISO 14001 Environment

Detailed information about TG 11

This is our bestselling snow gun!

It is thanks to the low energy consumption and the simple and reliable operation technology.

The principle is based on that water and air are mixed externally. The Compressed air task is only to start the freezing process. The rest is handled by the nature. This means that the gun have a unique low energy need.

The air flow is only about 1 m³ / min at 7 bar pressure, which also gives a very low noise level.
