TG 7

Data: Top Gun 7

Material snow gun: Aluminium

Material tower: Aluminium

Weight snow gun: 13 kg
Weight bracket: 22 kg

Length snow gun: 6,7 m

Raise, lower and swivel mechanism:
Mechanical or motor-driven screw or hydraulic hand pump

Brackets for different needs:
Concrete foundation
Pole bracket
Rock foundation

Capacity/ water consumption at 30 bars water pressure:

-4°C 100 liter / min =
About 15 m³ snow/hour

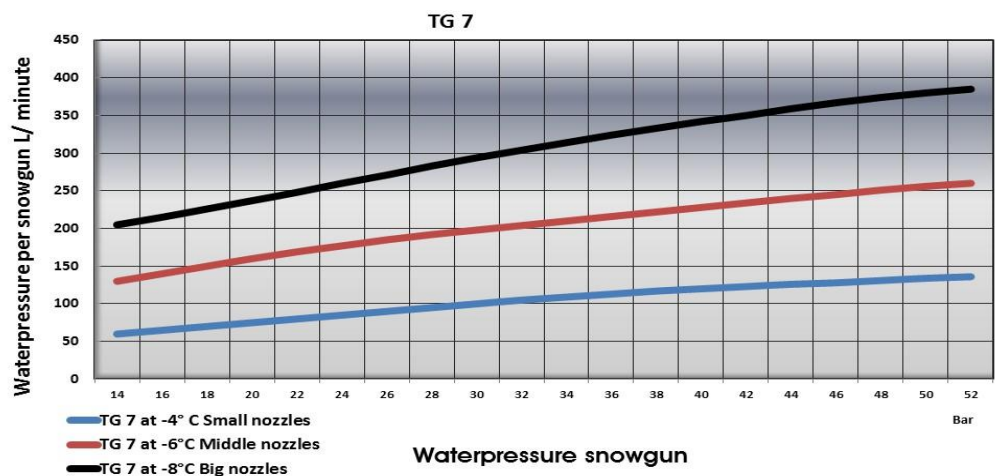

-6°C 200 liter / min =
About 30 m³ snow/hour

-8°C 300 liter / min =
About 45 m³ snow/hour

Compressed air consumption:

At 7 bar only 1 m³/minute

Air pressure: >5 bar
Water pressure: 14 - 50 bar

JL Toppteknik AB is
certified for
ISO 9001 Quality and
ISO 14001 Environment

Detailed Information about TG 7

A 7 meters tower gun with such a low weight that we call it "movable".
This model weighs only 35 kg, and is the perfect gun for the more narrow slopes.

The principle is based on that water and air are mixed externally.
The compressed air task is only to start the freezing process.
The rest is handled by the nature. This means that the gun have a unique low energy need.
The air flow is only about 1 m³/minut at 7 bar pressure, which also gives the snow gun a very low noise level.
